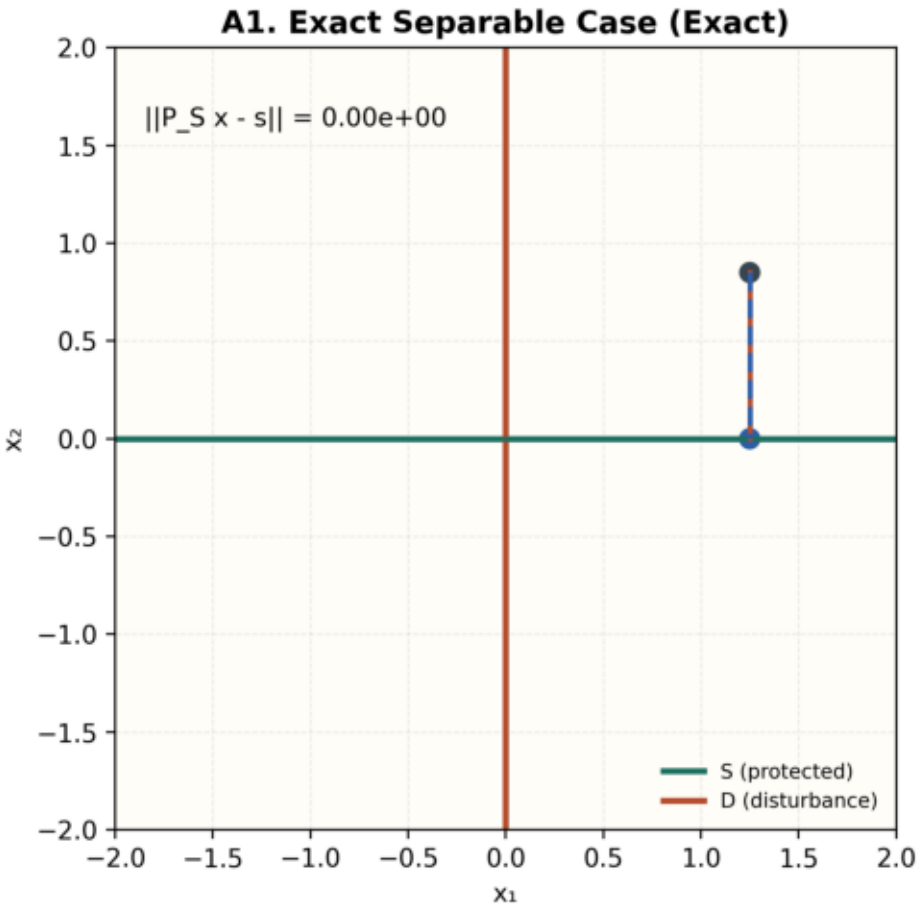
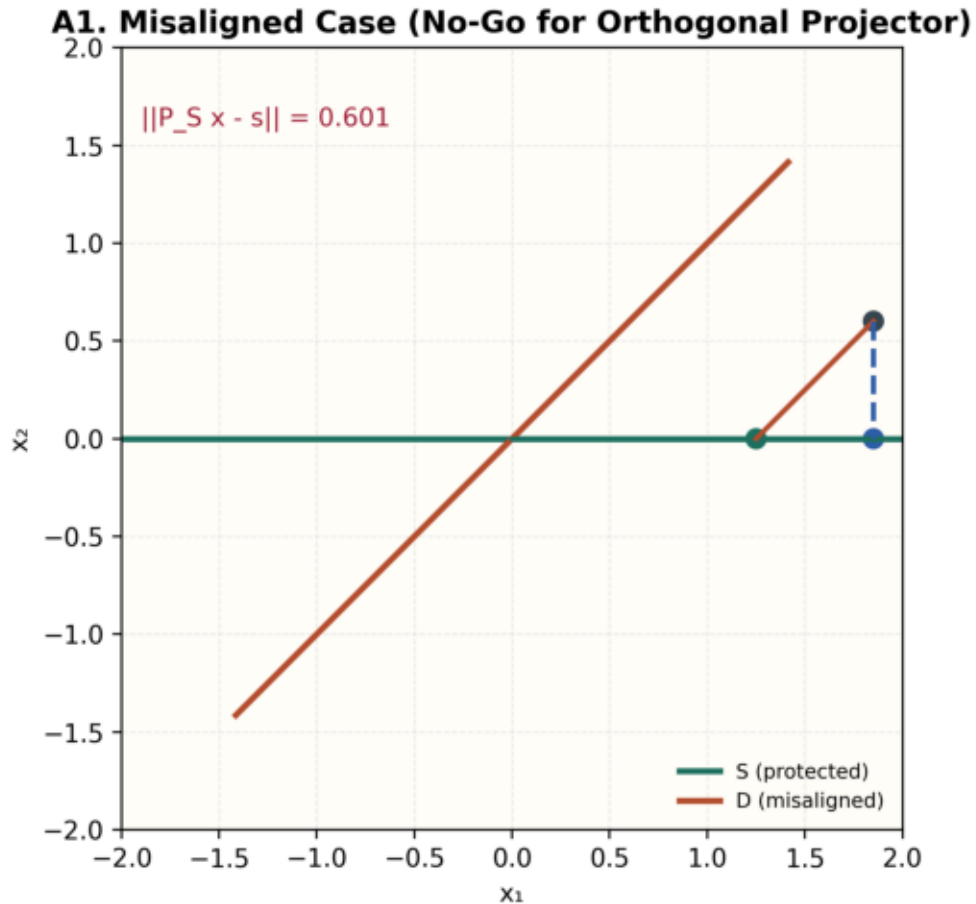
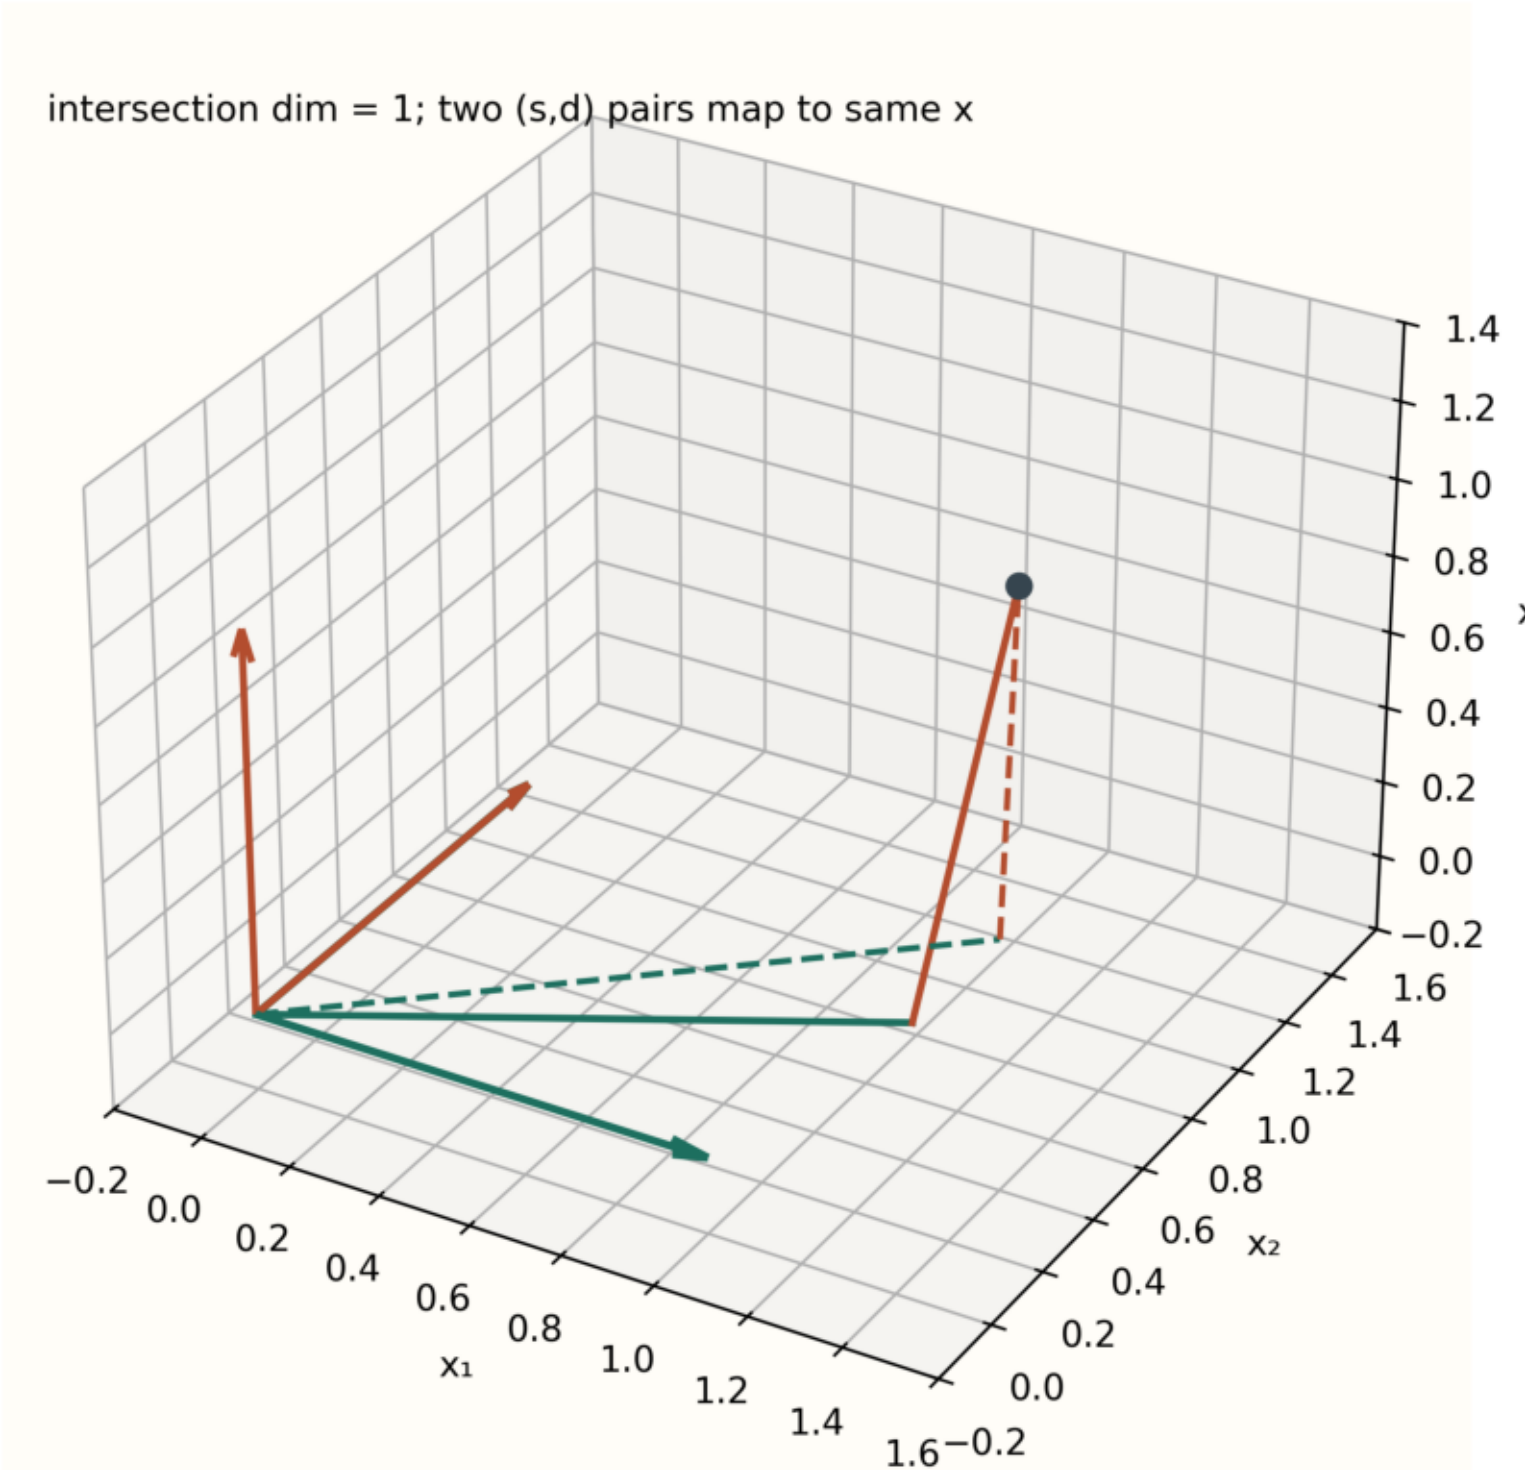
A_core_geometry_2d



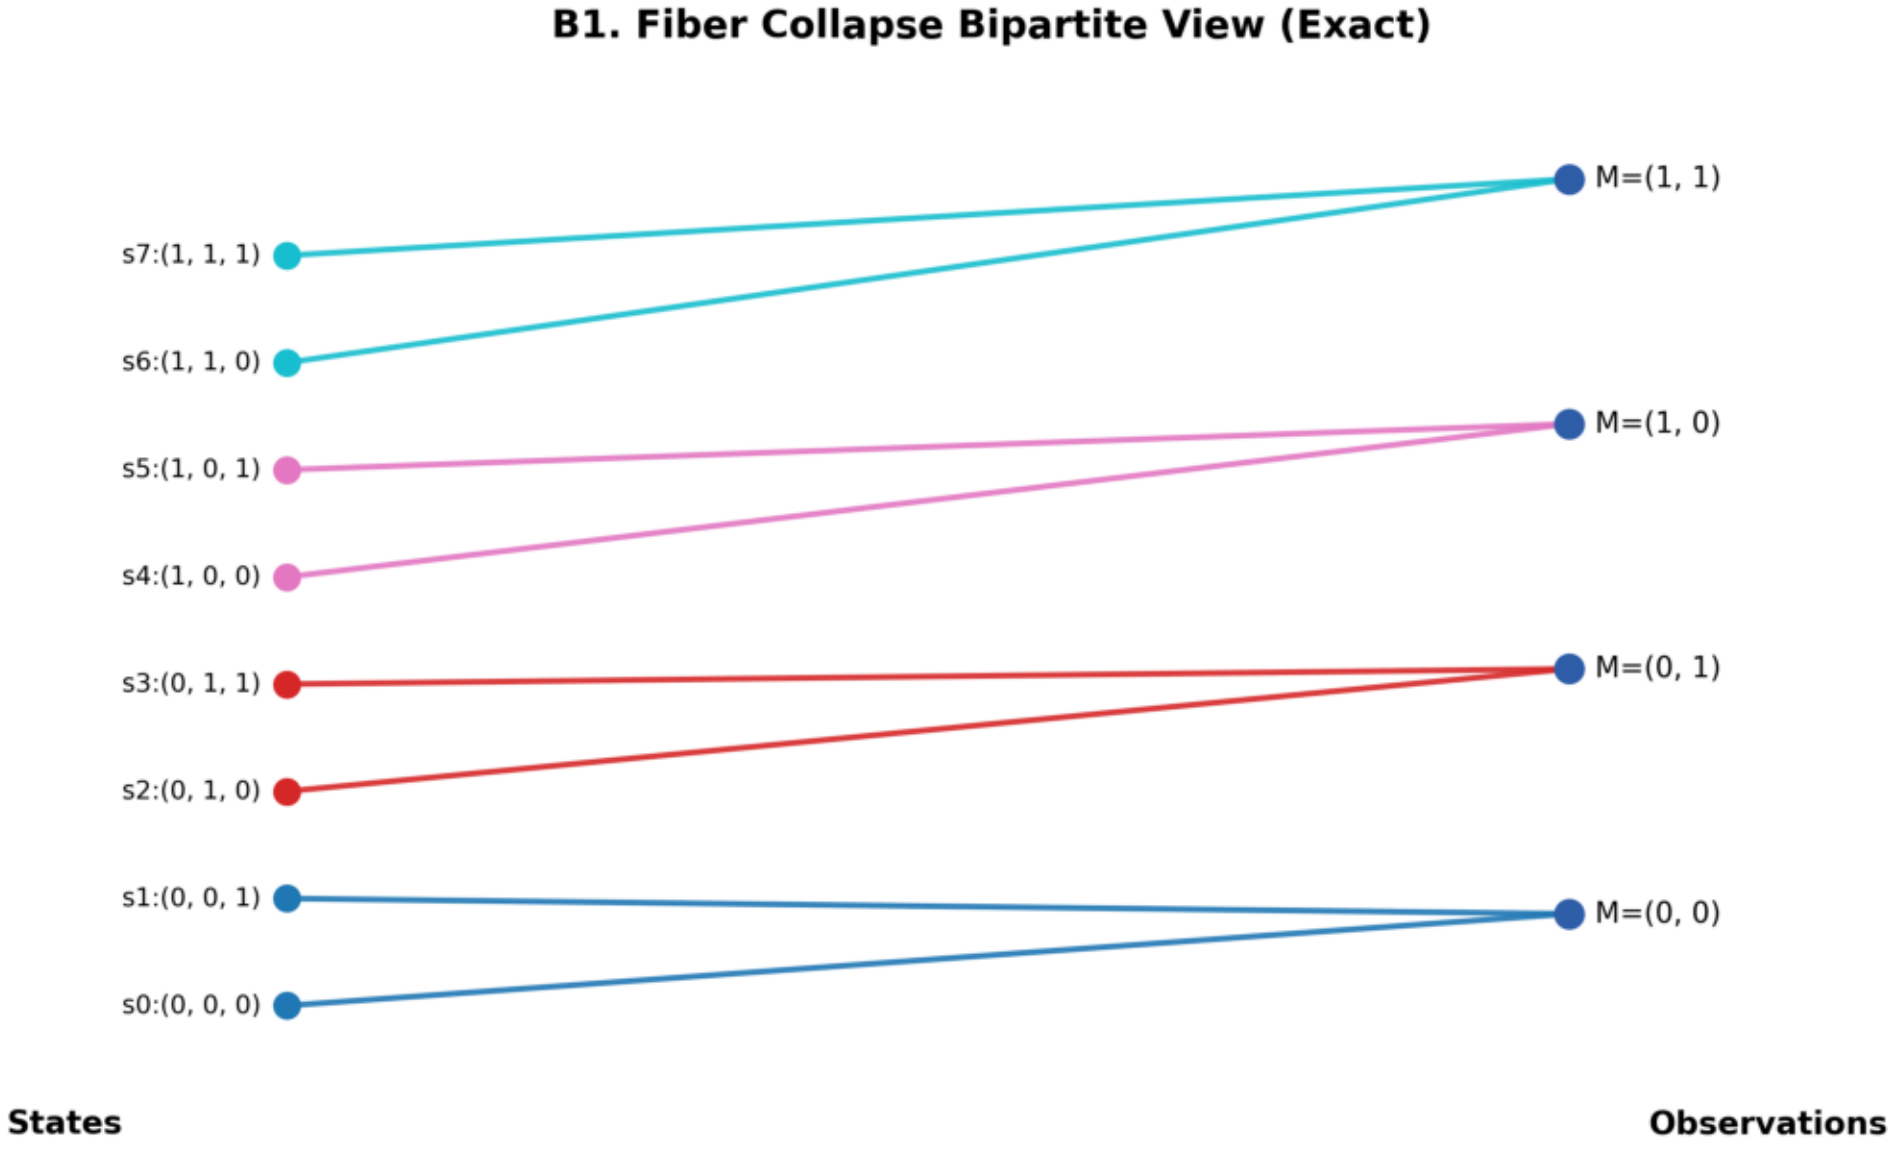


A_core_geometry_3d

A2. Overlap Geometry In 3D (Exact non-uniqueness)

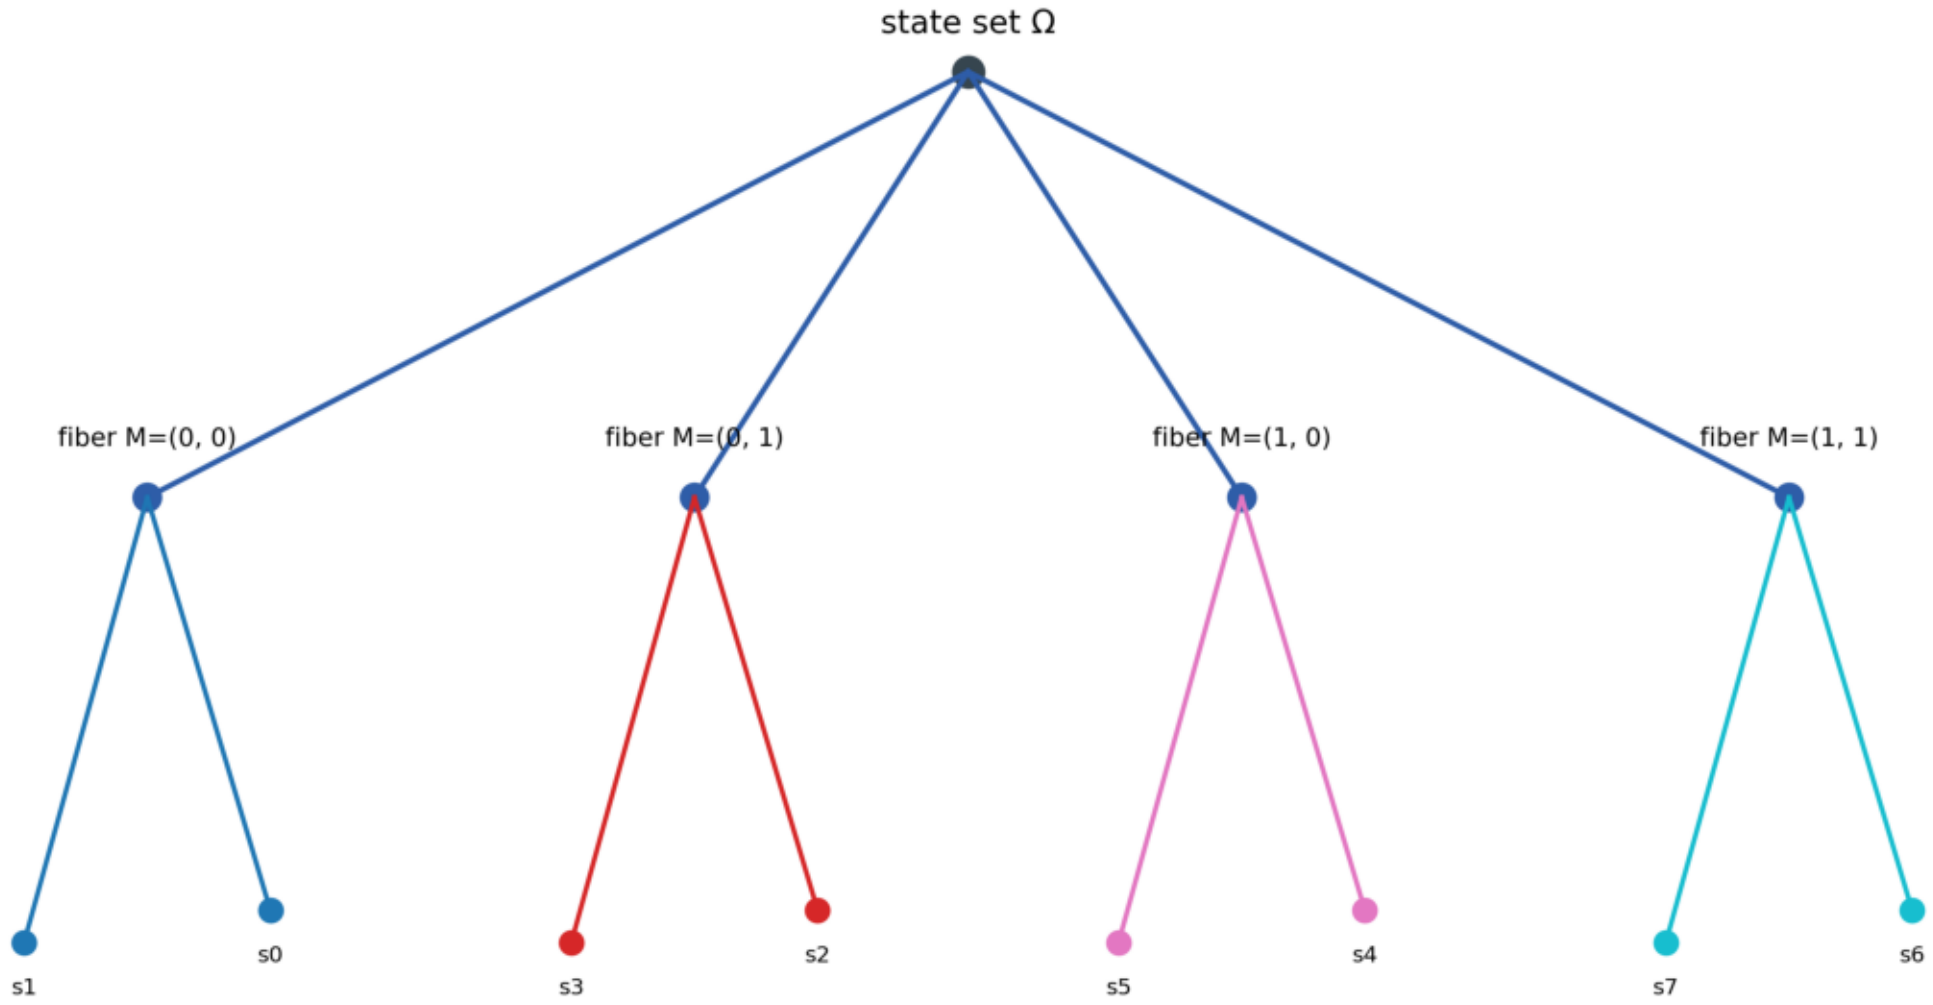


B_fiber_bipartite



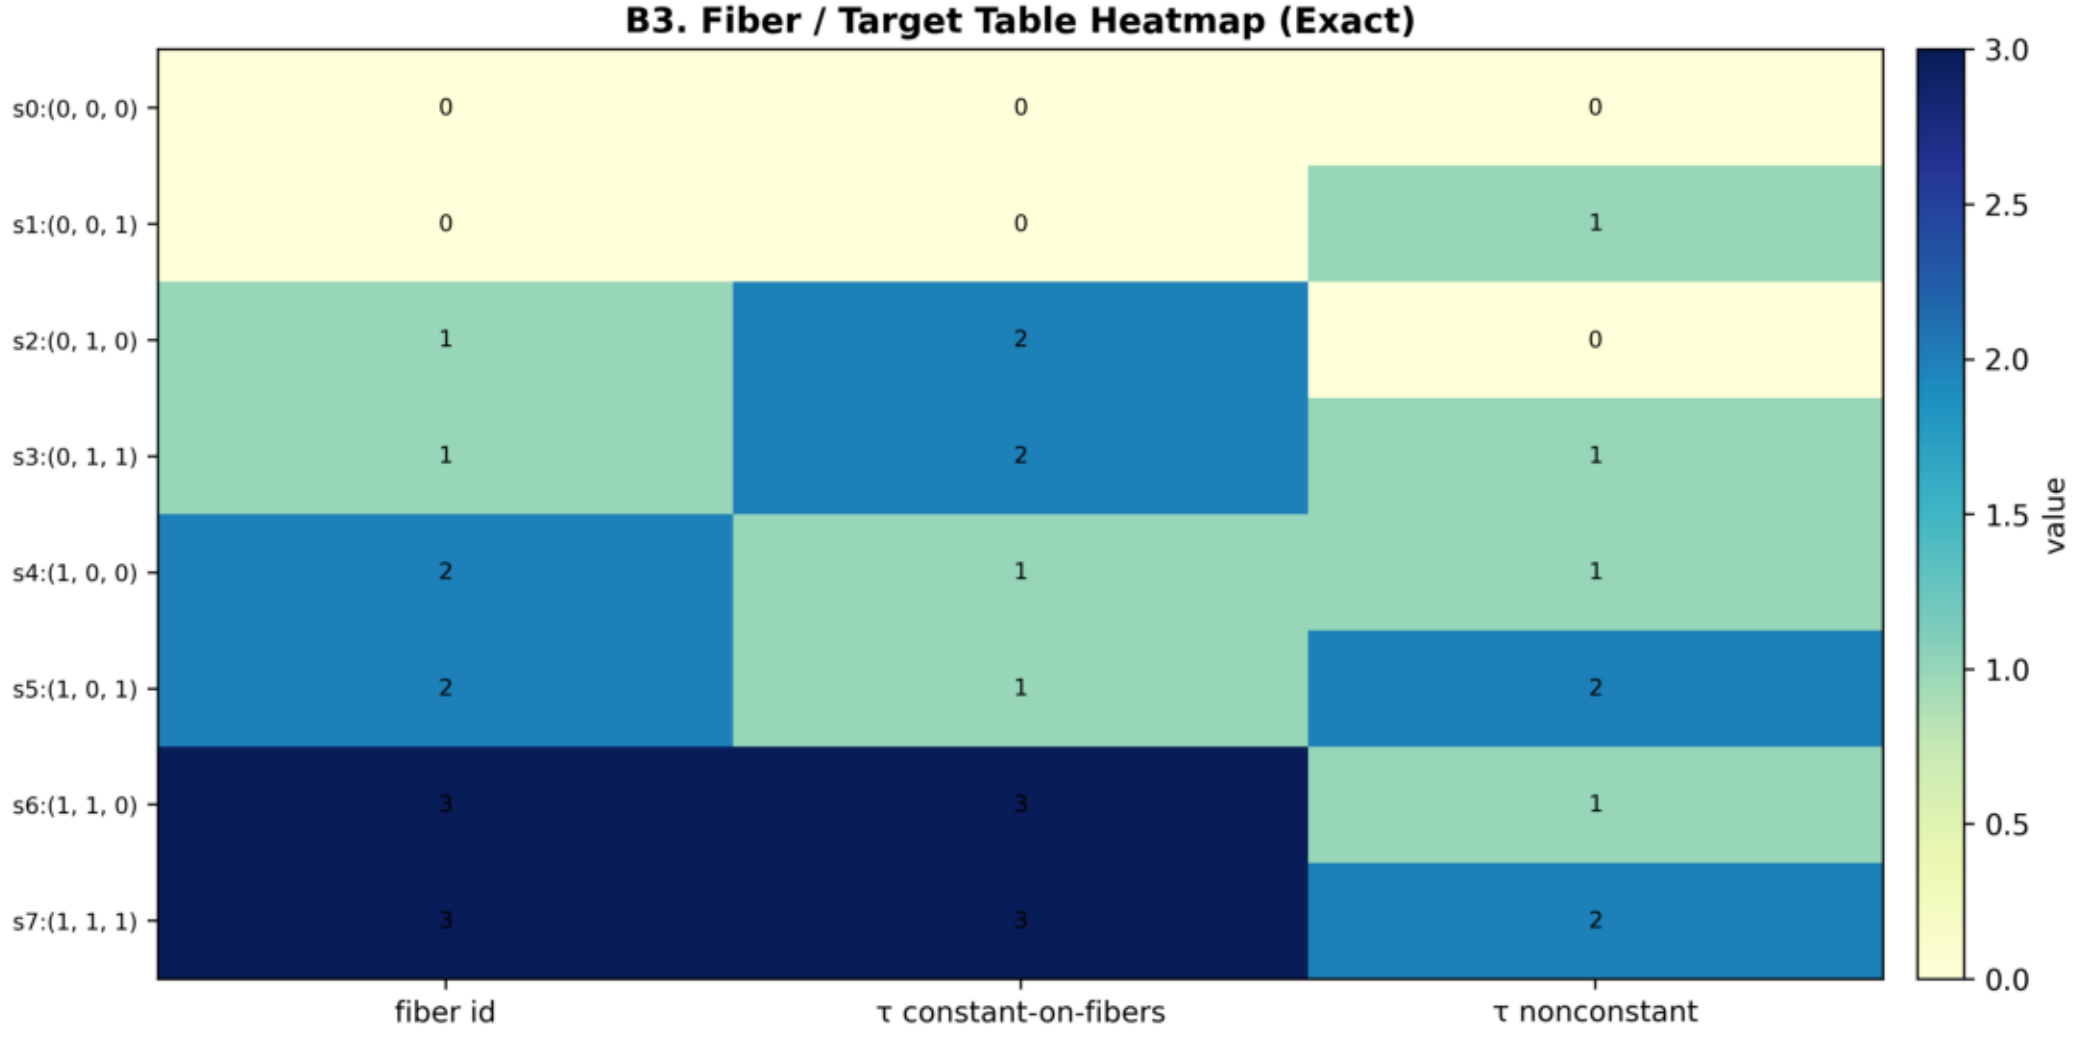
B_fiber_partition_tree

B2. Partition Tree View (Exact)

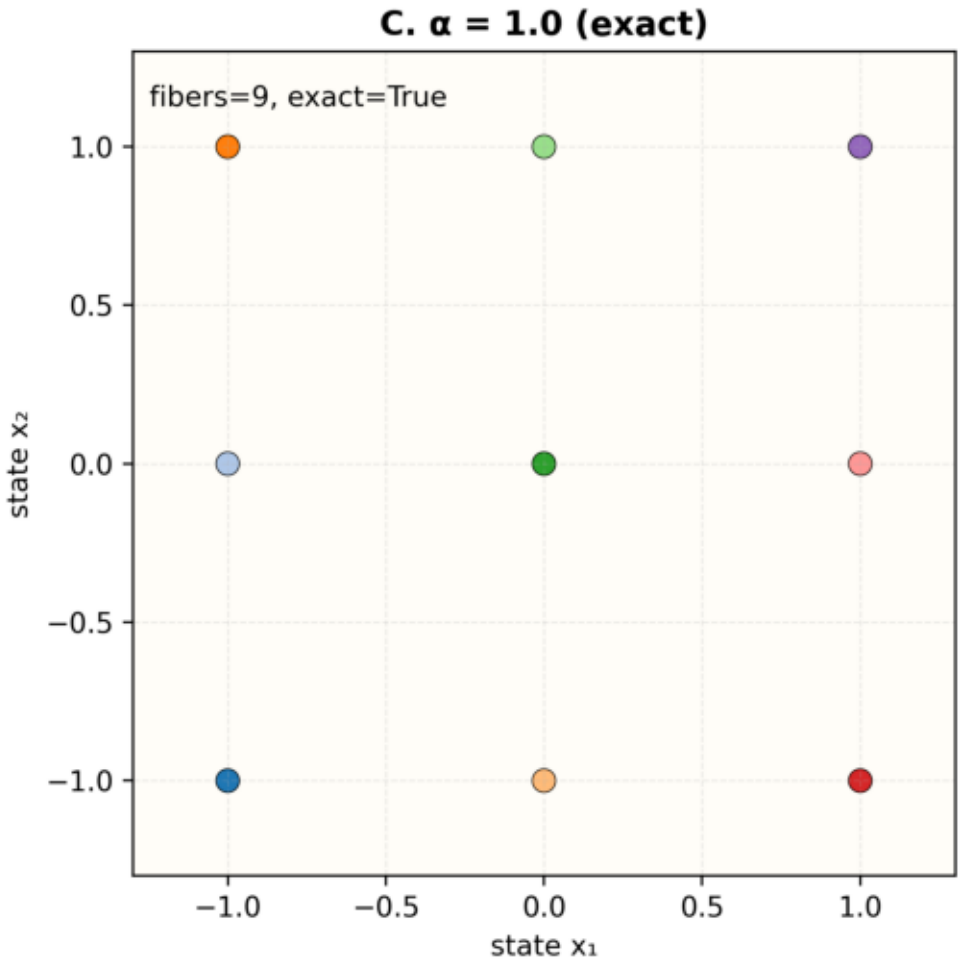


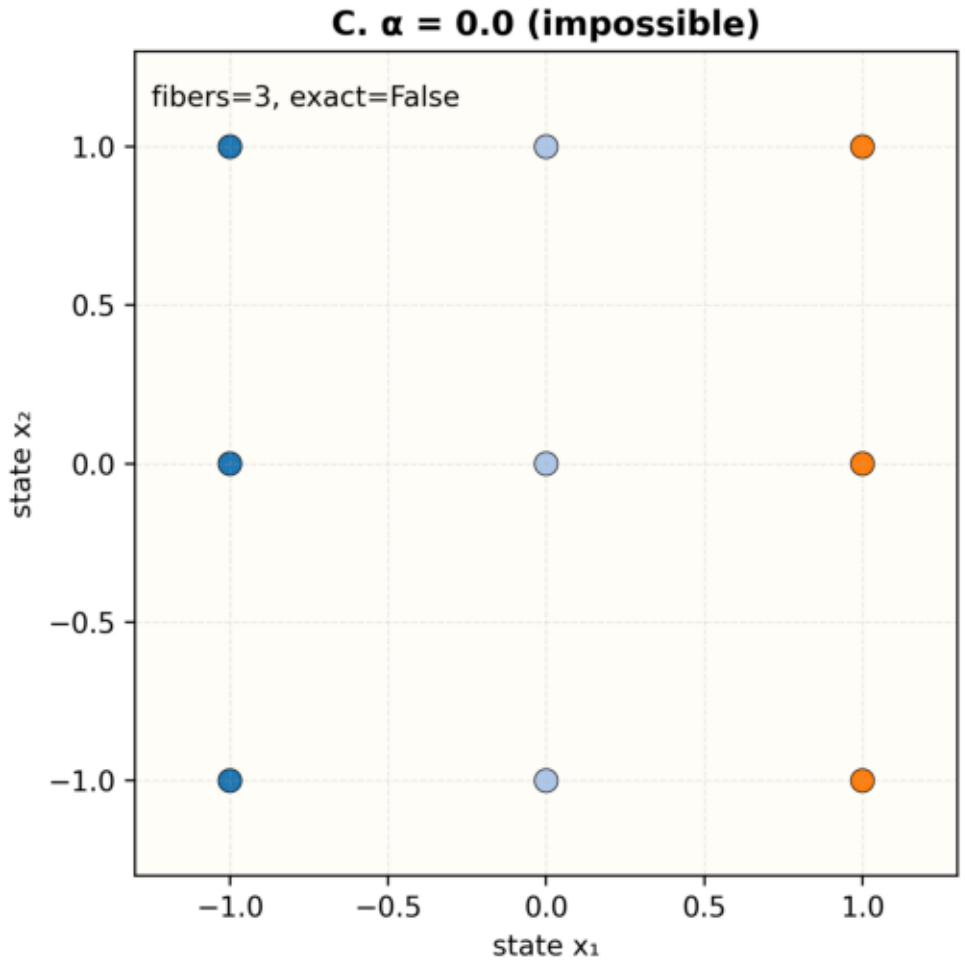
τ_const is constant on each branch; τ_nonconst is not.

B_fiber_table_heatmap



C_transition_keyframes

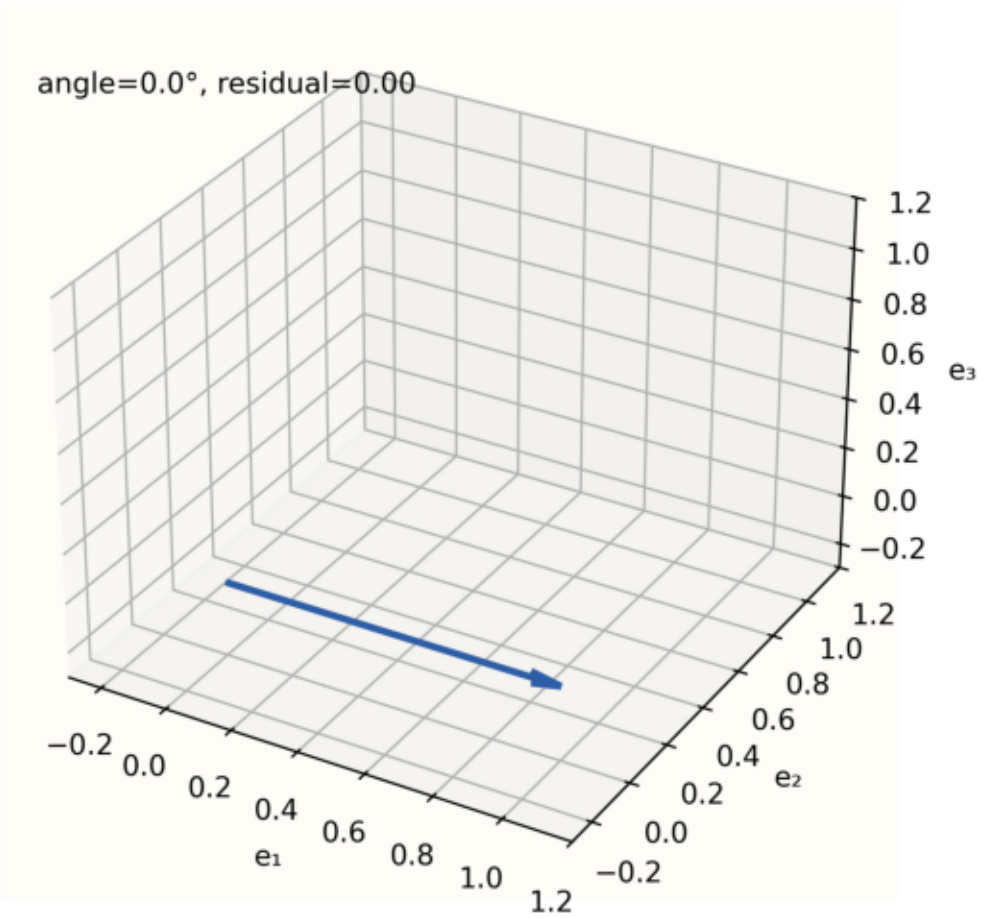




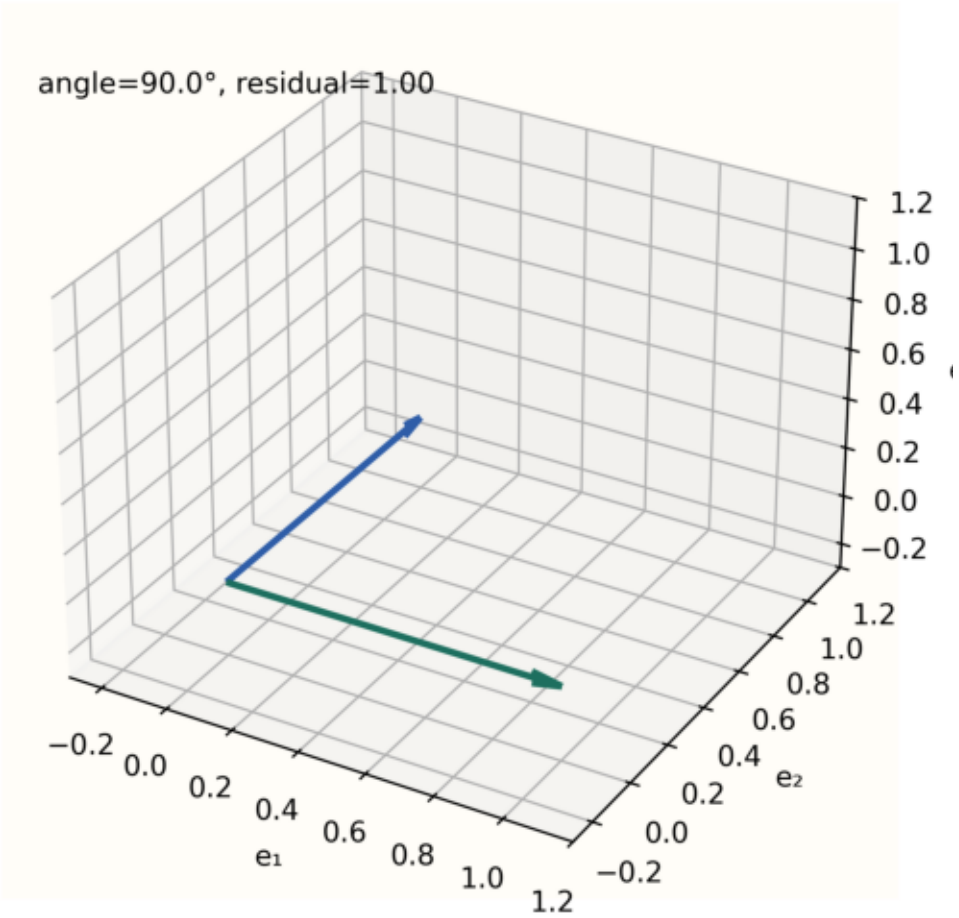
D_same_rank_insufficiency

Same observation rank = 1 for both O_1 and O_2; recoverability differs by alignment.

D. Same rank, exact verdict

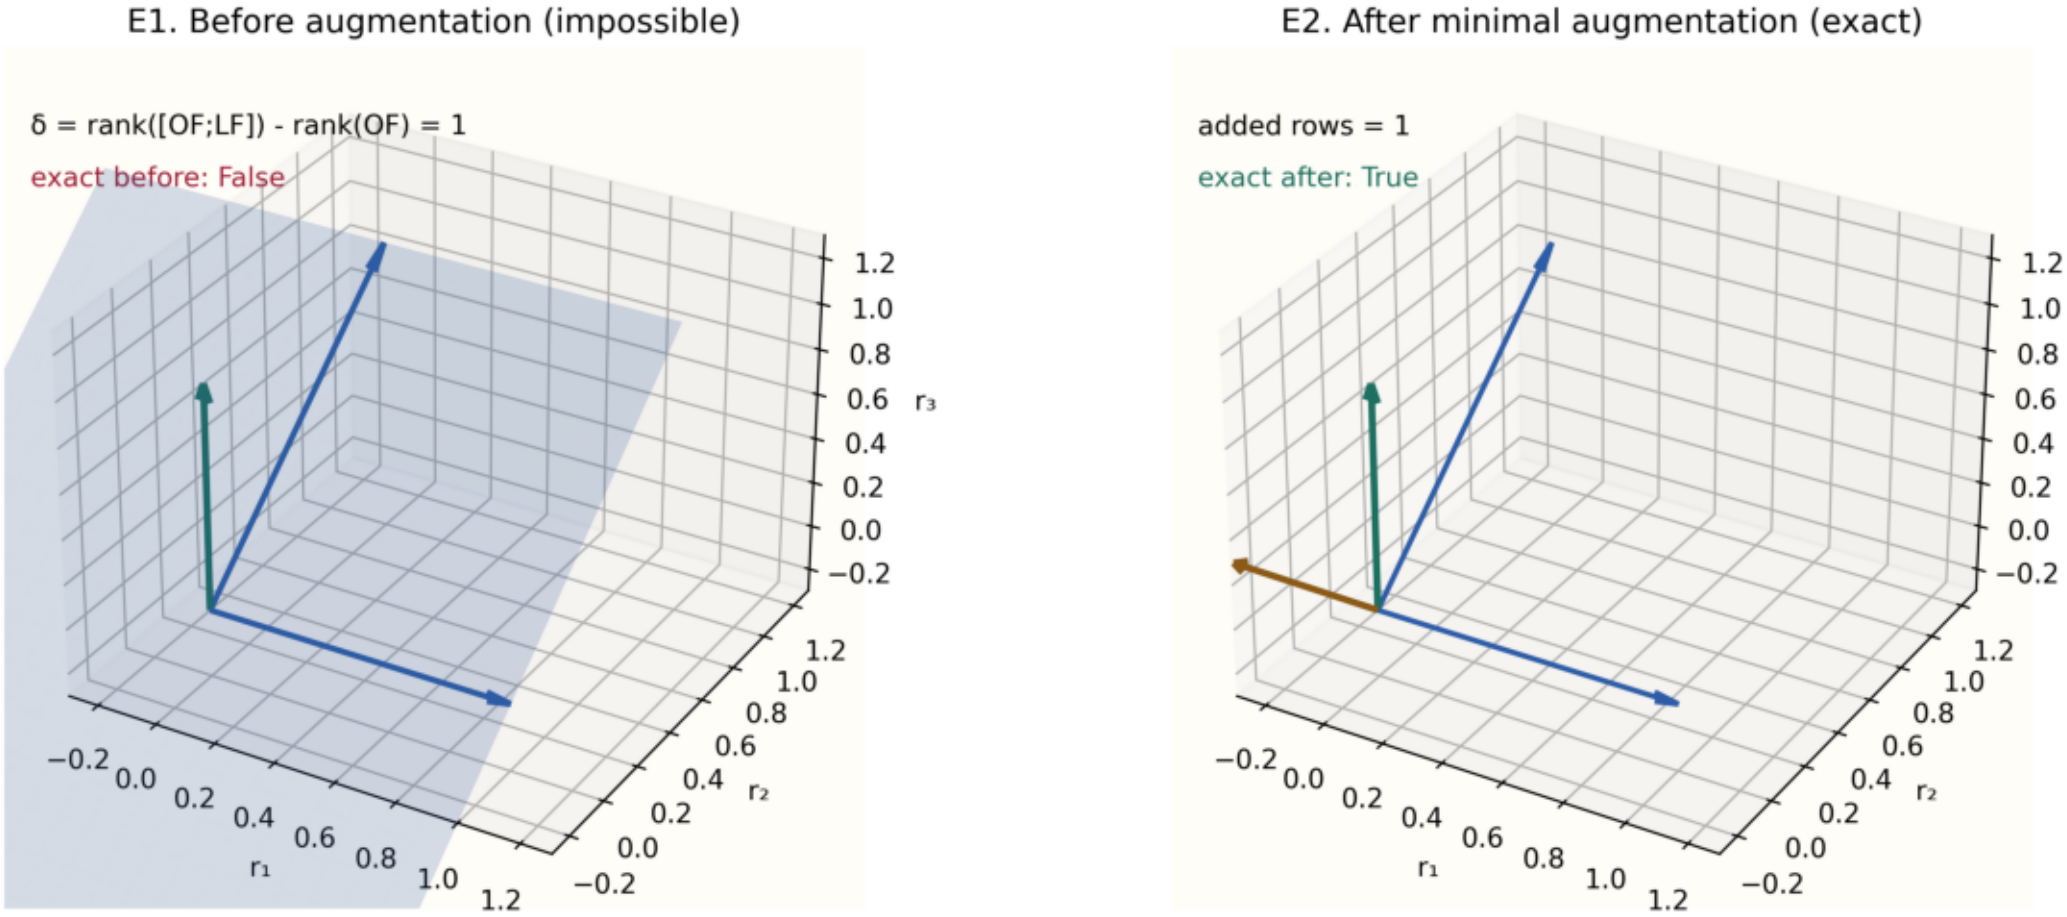


D. Same rank, impossible verdict



E_minimal_augmentation

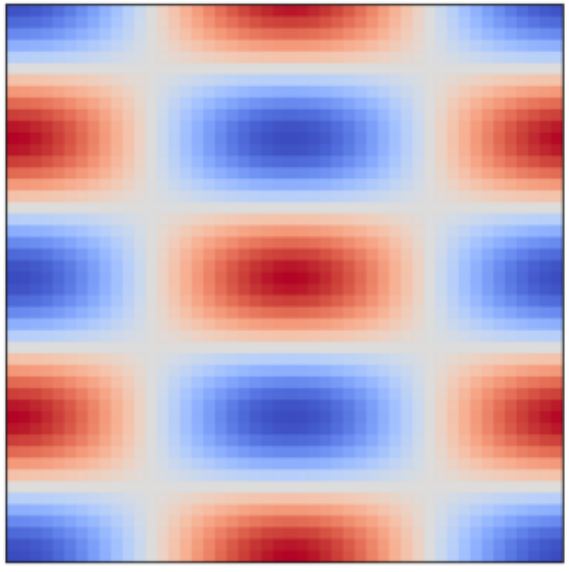
Minimal augmentation law: δ(O,L;F) = rank([OF;LF]) - rank(OF)



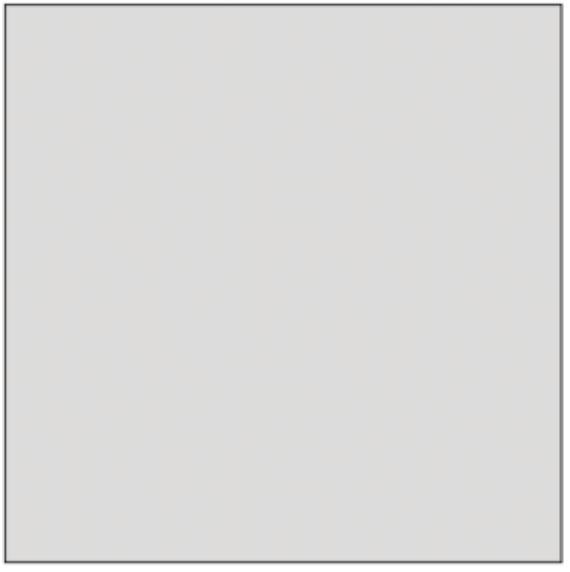
F_periodic_vs_bounded

Periodic exact projection vs bounded-domain transplant failure (Exact + No-Go)

F1. Periodic divergence before



F1. Periodic divergence after exact projection

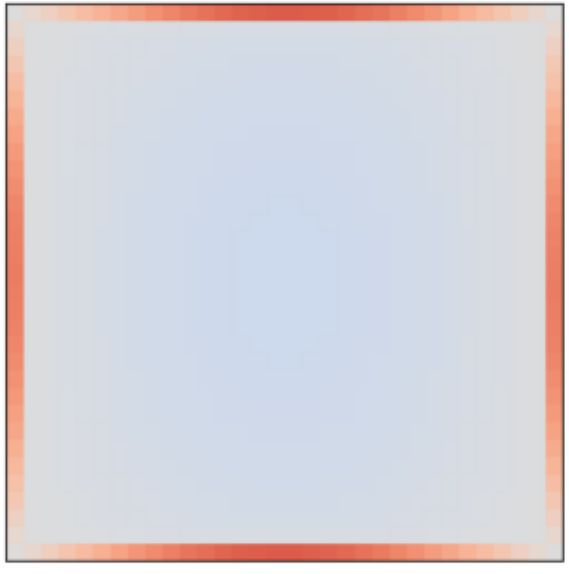


Periodic metrics

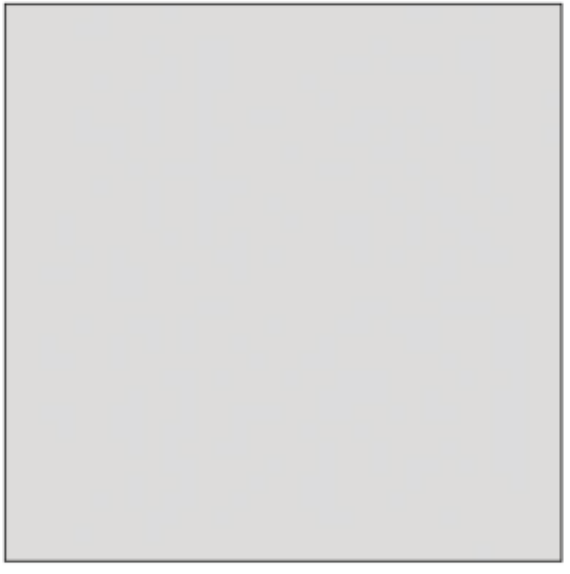
periodic $||div||_2$ before: 1.936e+01
periodic $||div||_2$ after: 2.414e-14
periodic recovery error: 1.173e-15

canonical summary before: 1.936e+01
canonical summary after: 2.414e-14

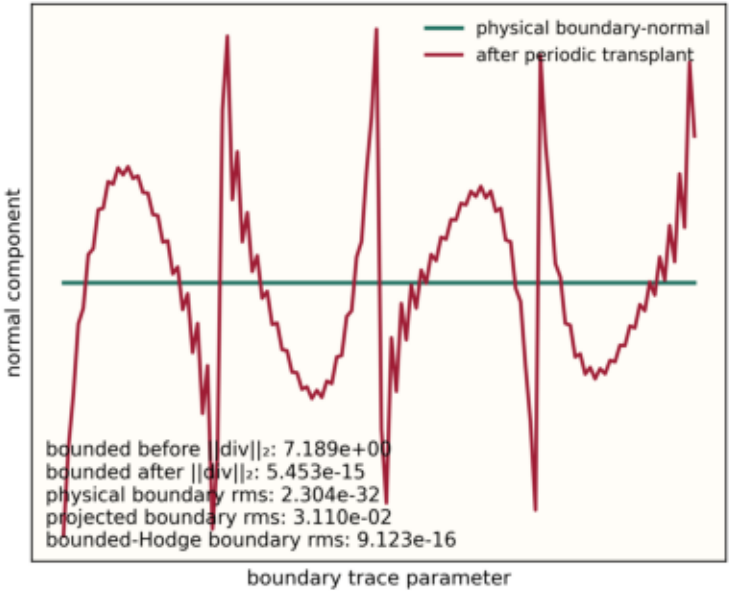
F2. Bounded divergence before



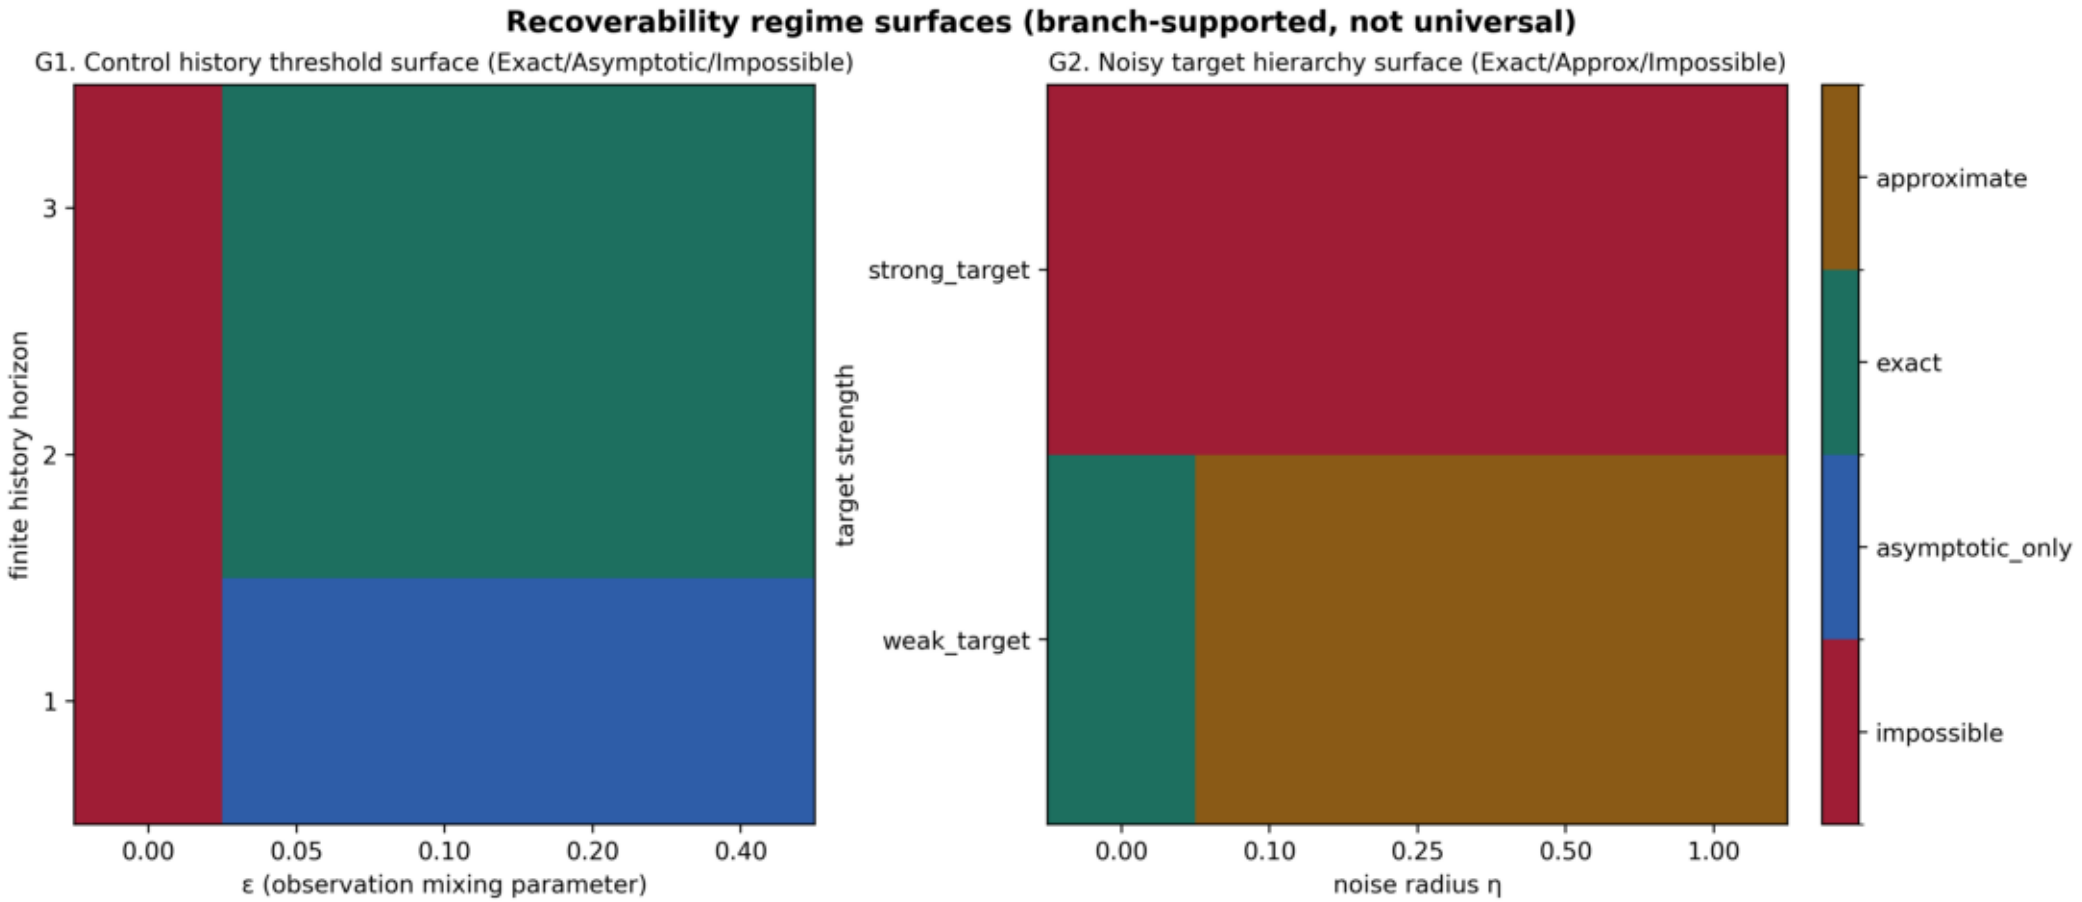
F2. Bounded divergence after periodic transplant



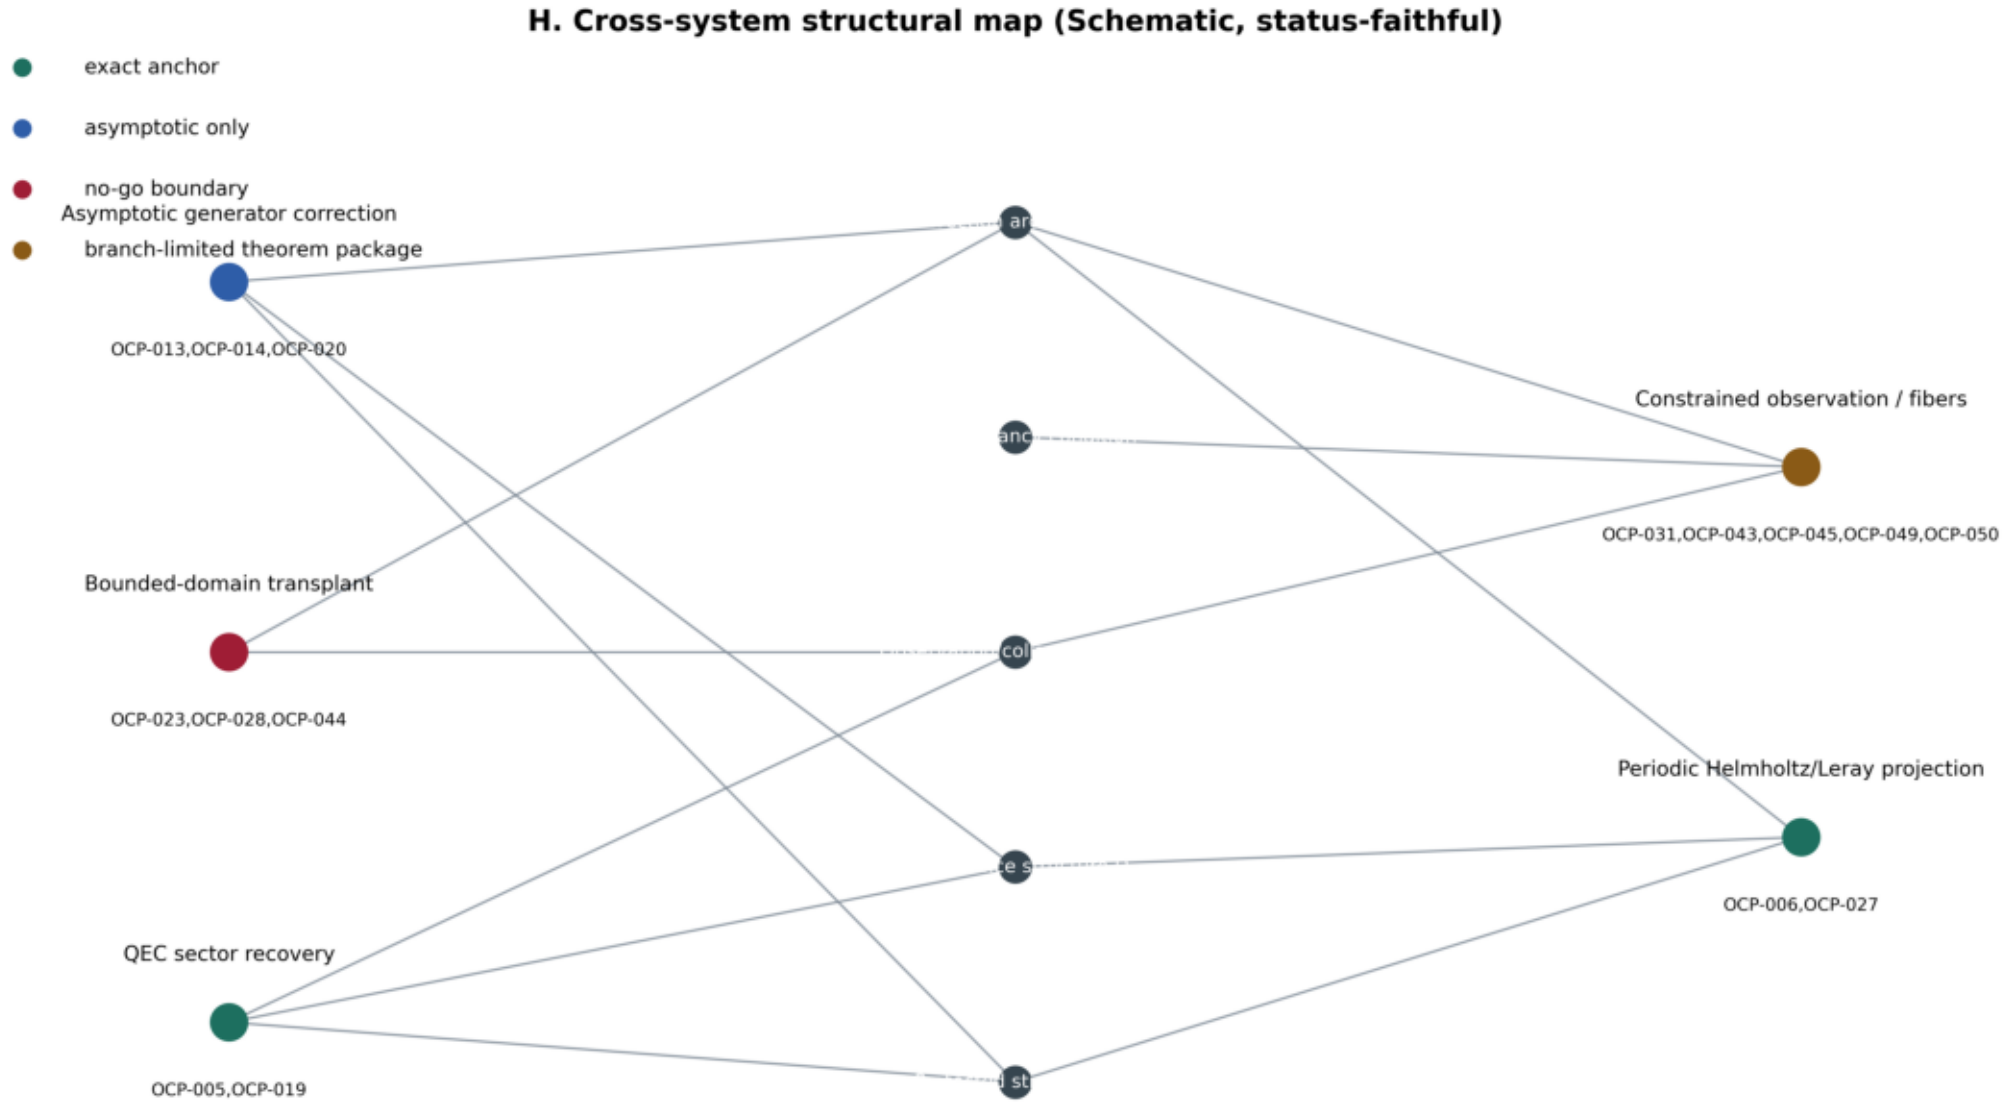
Boundary-normal mismatch



G_threshold_surfaces

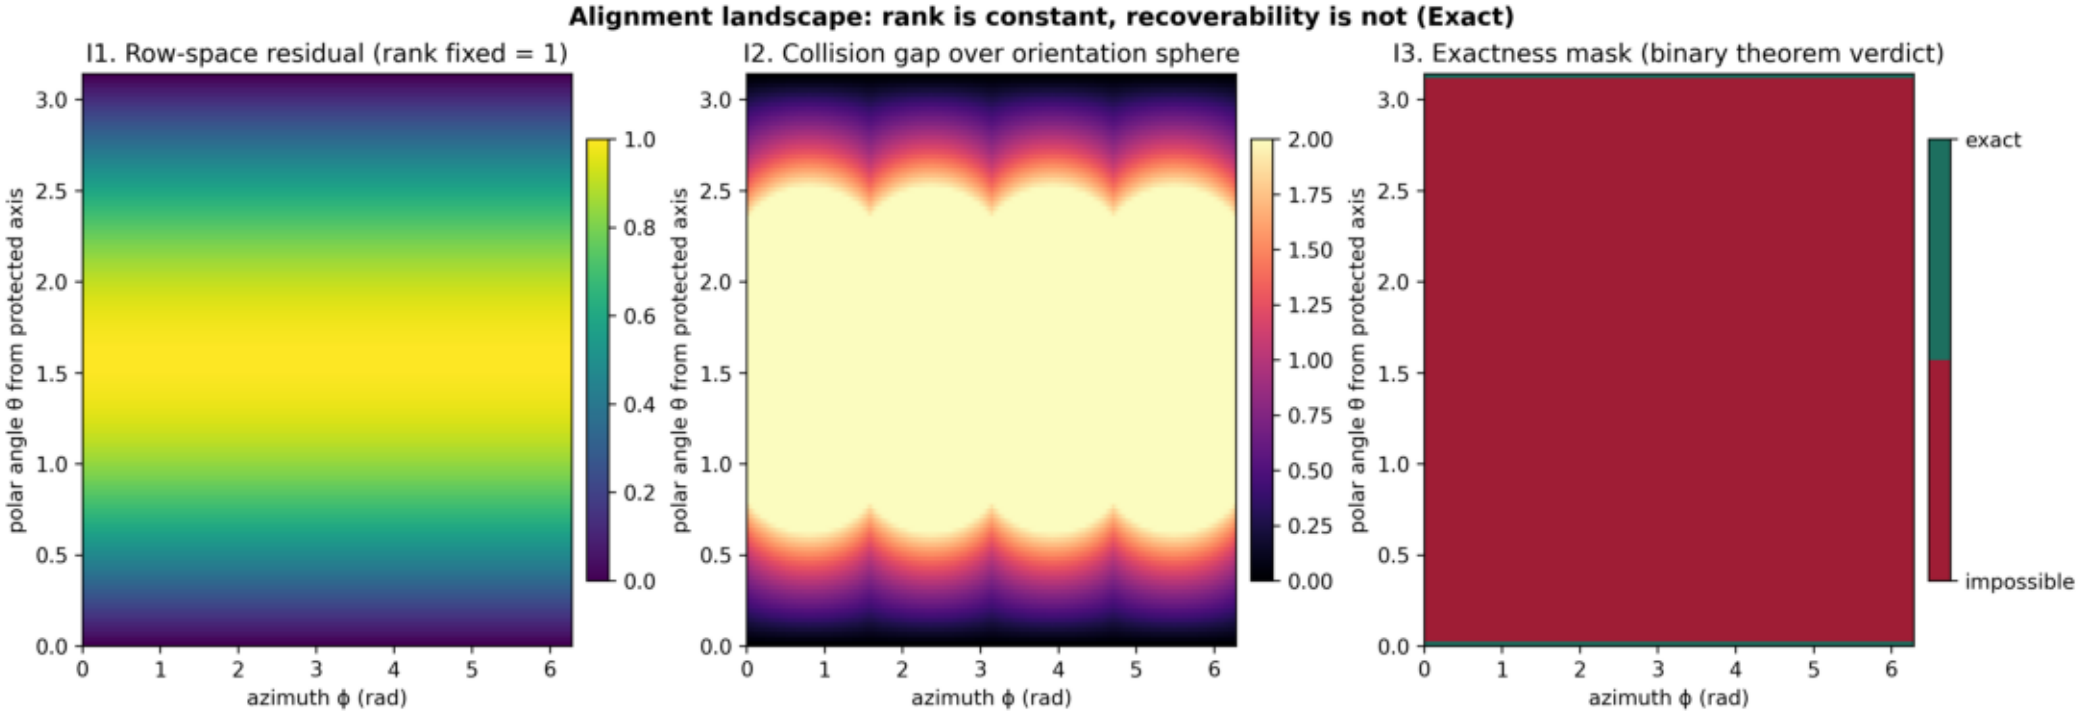


H_cross_system_structural_map

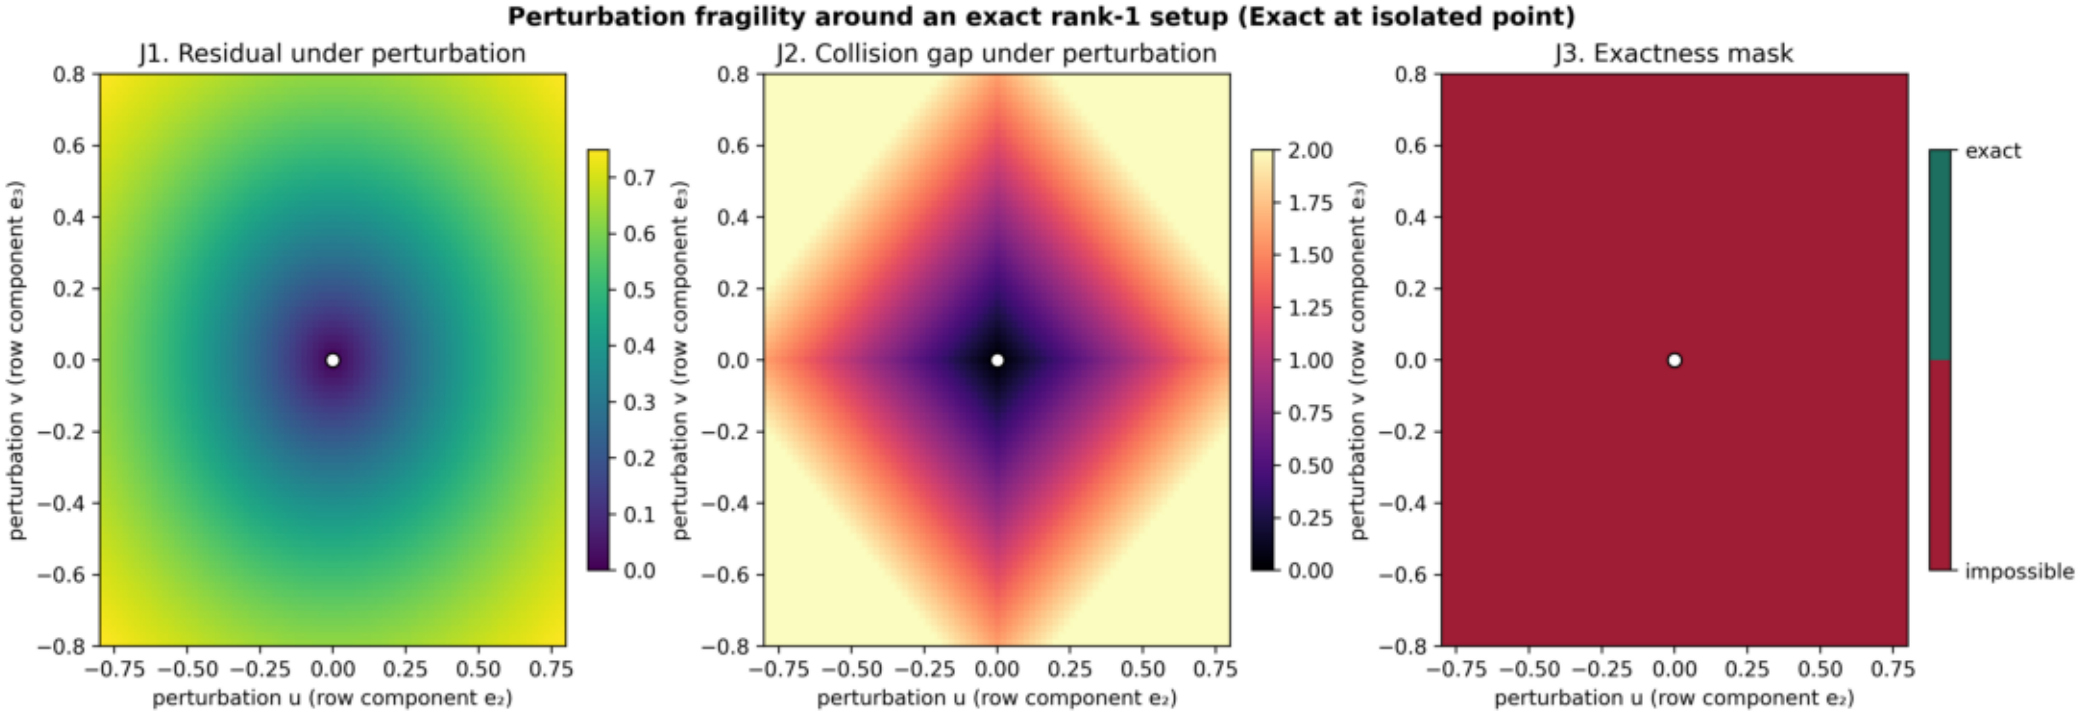


Schematic: topology/layout is explanatory; statuses and claim IDs are exact branch labels.

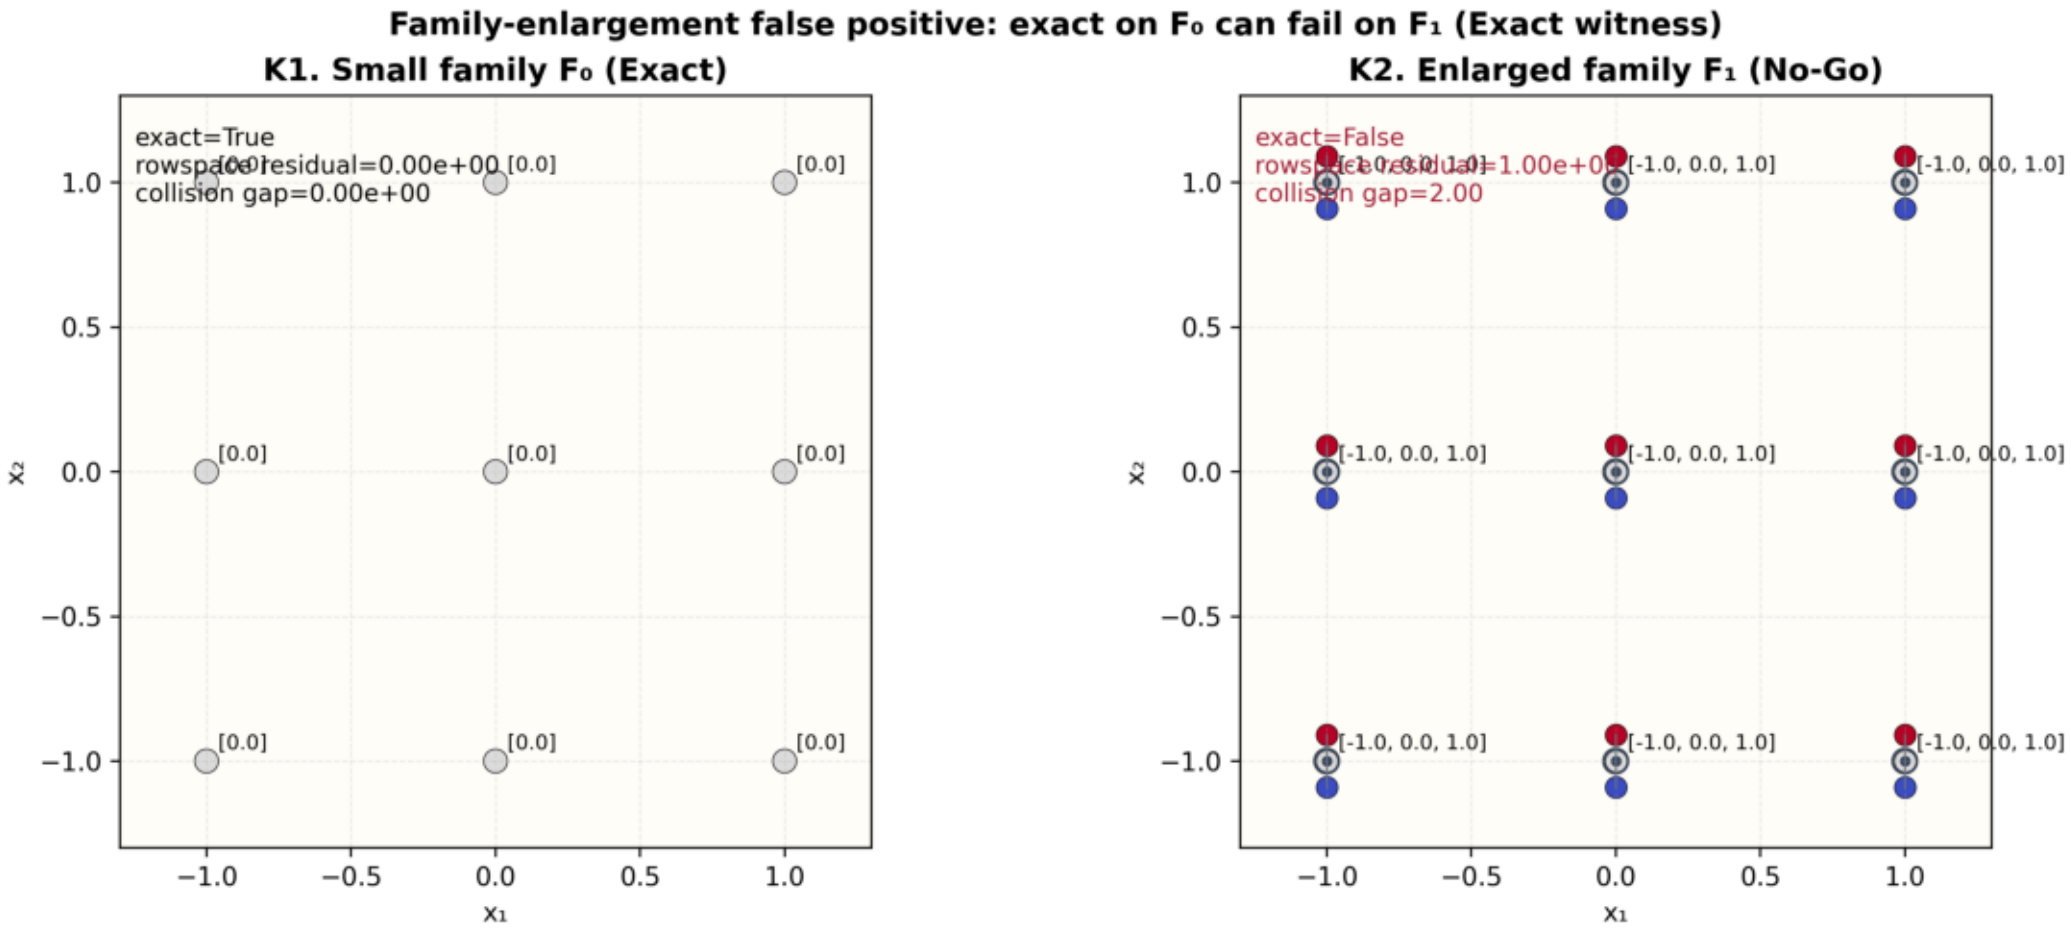
I_alignment_landscape



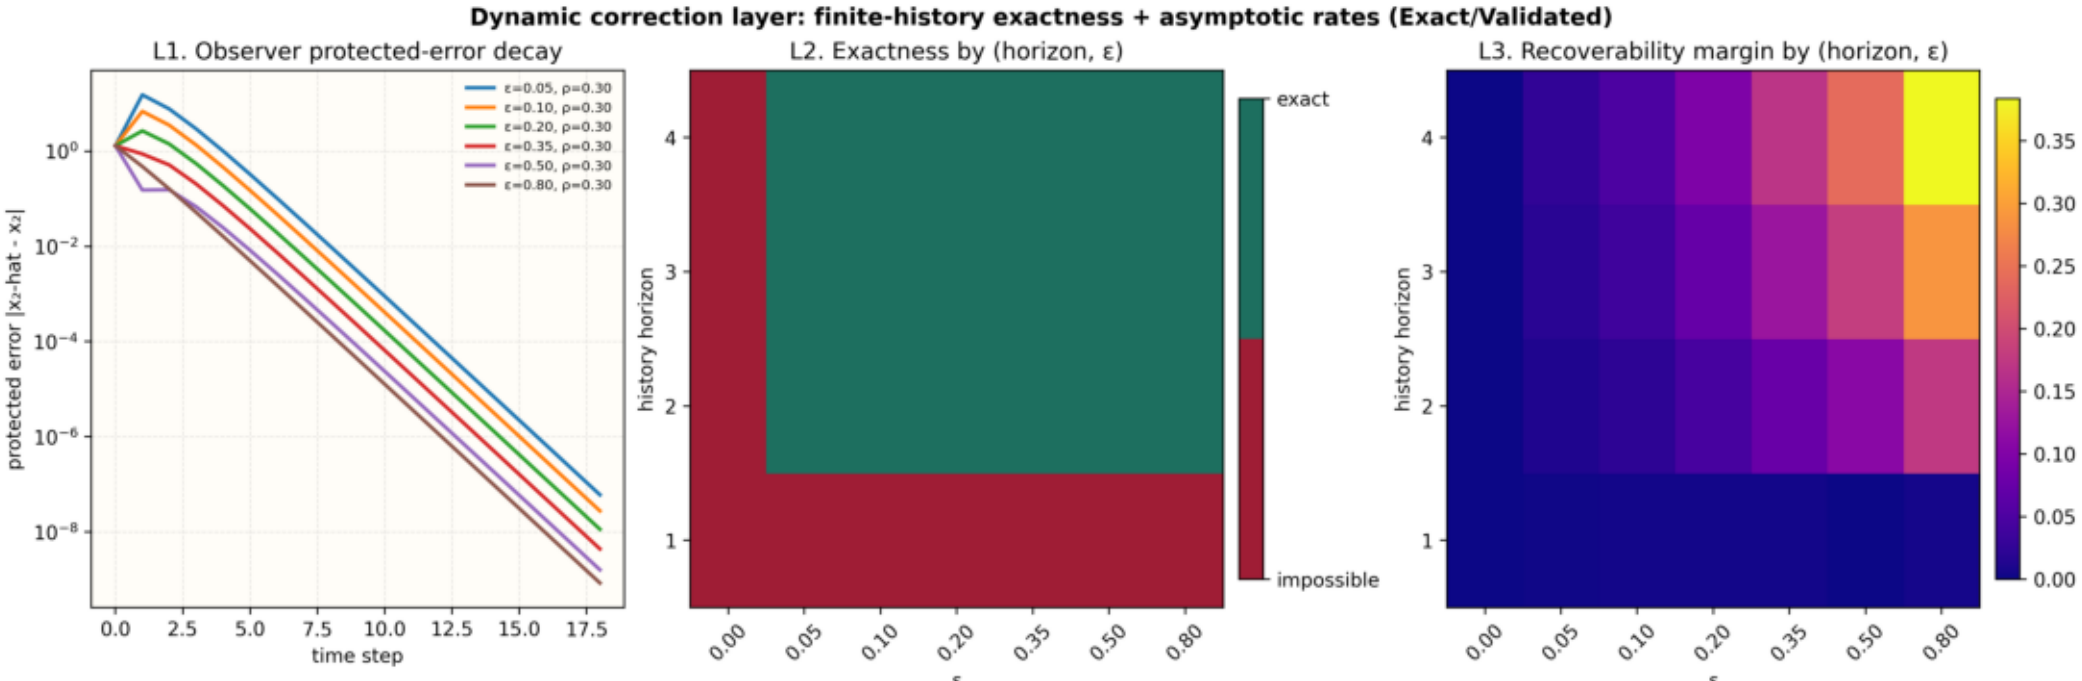
J_perturbation_fragility



K_family_enlargement_failure

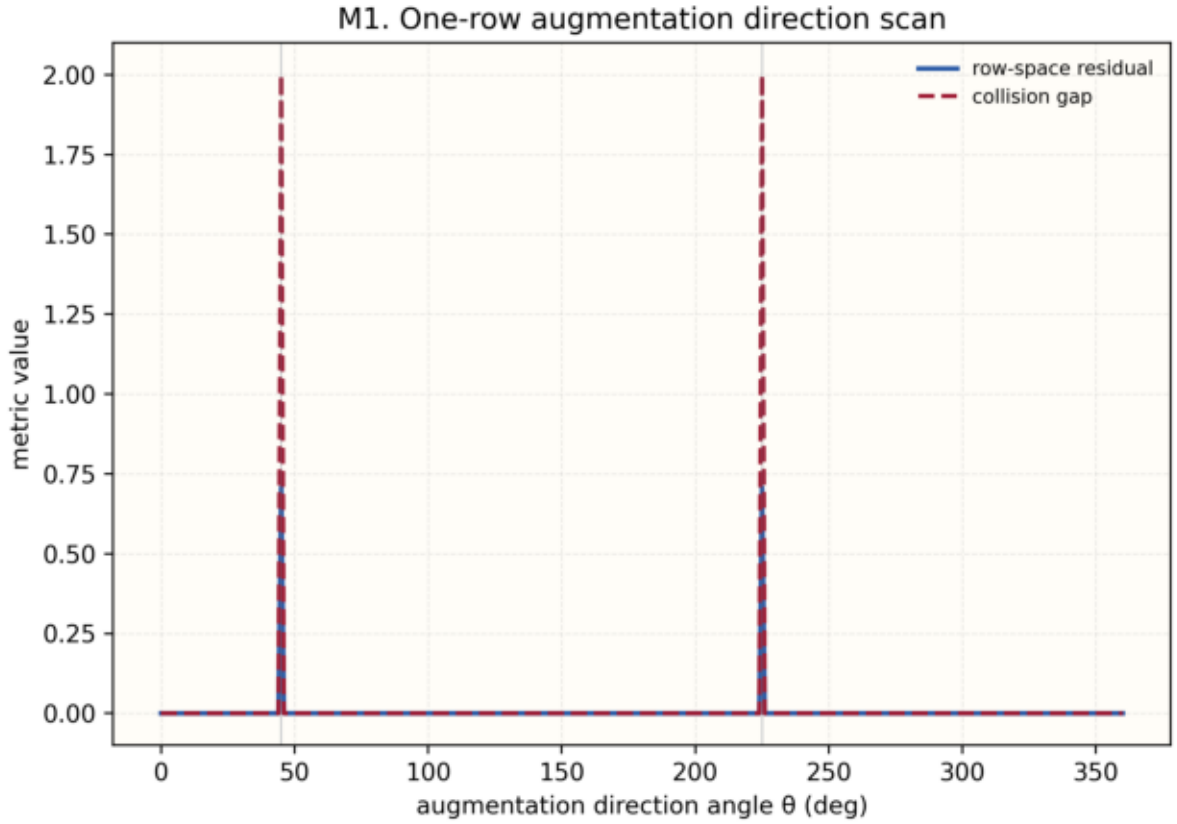


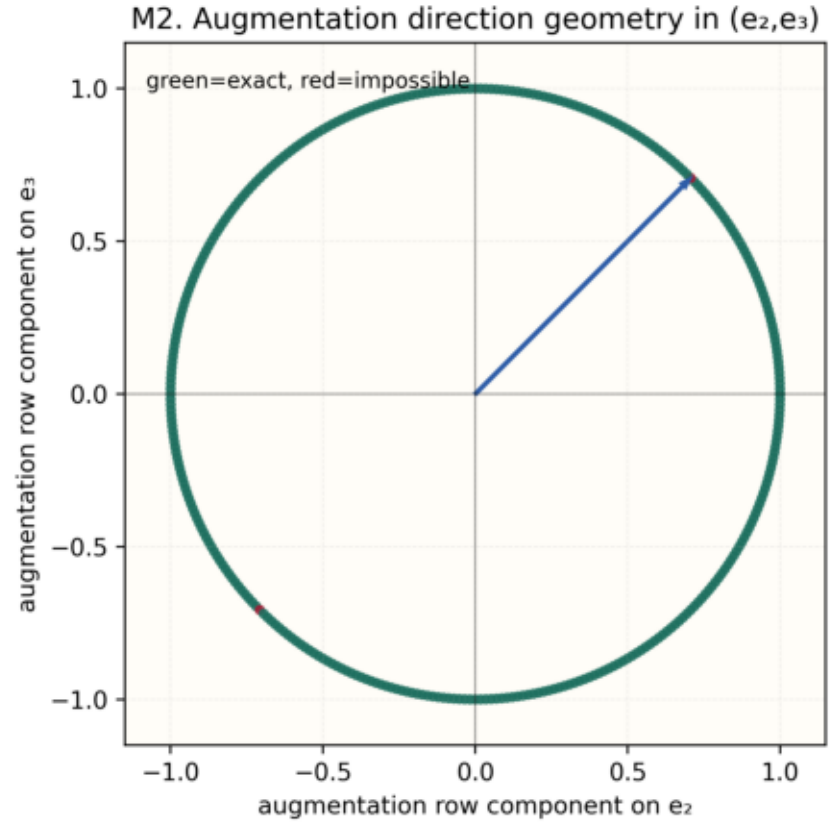
L_dynamic_rate_layer



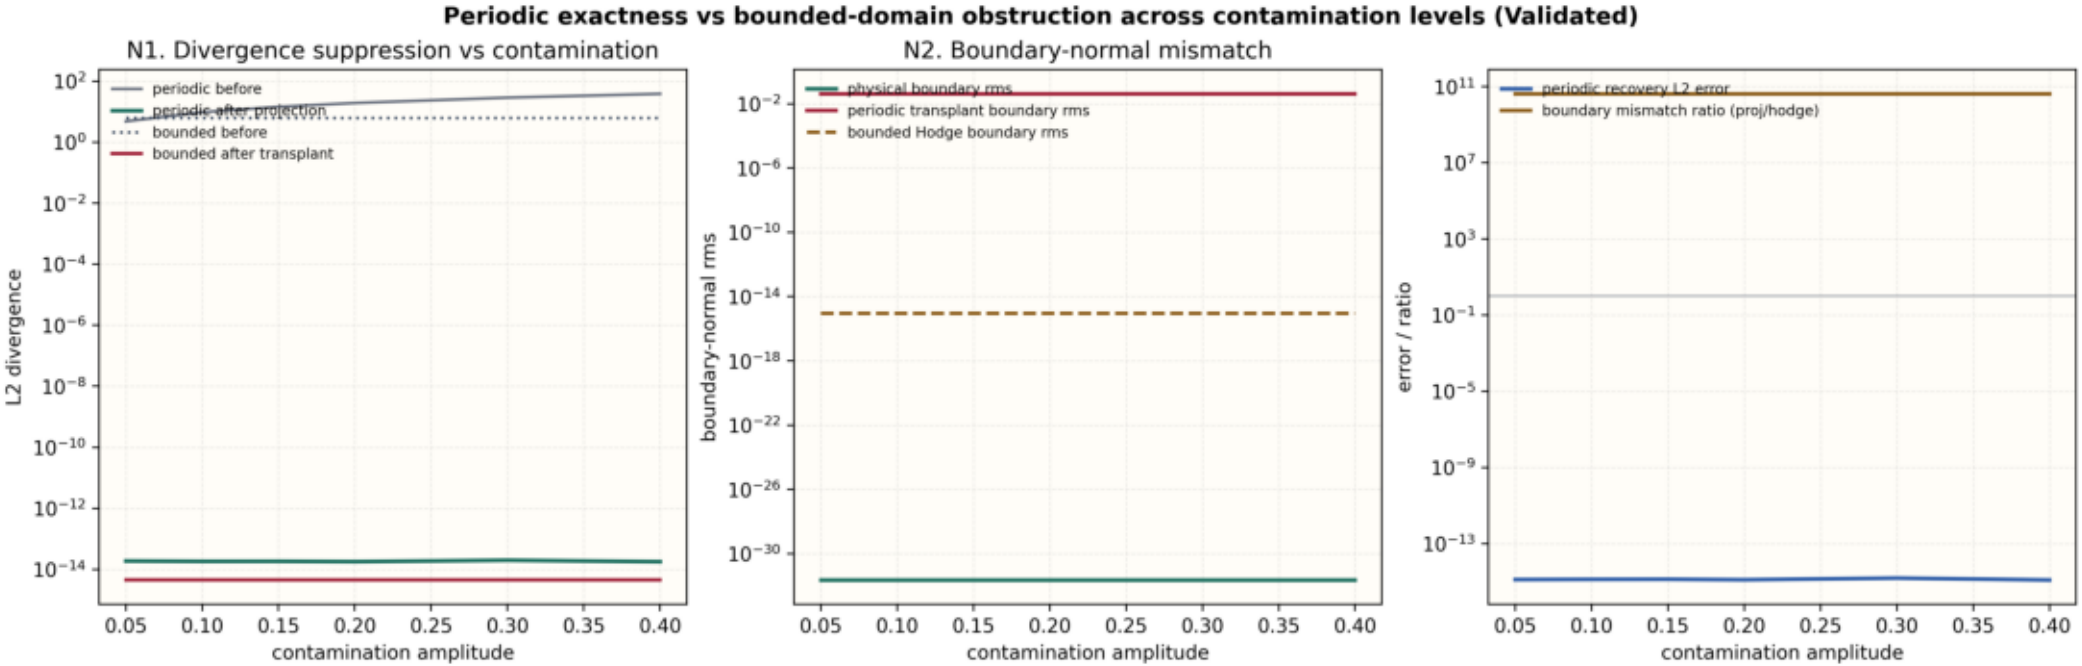
M_augmentation_direction_scan

Minimal augmentation beyond count: direction choice controls exact repair (Exact)

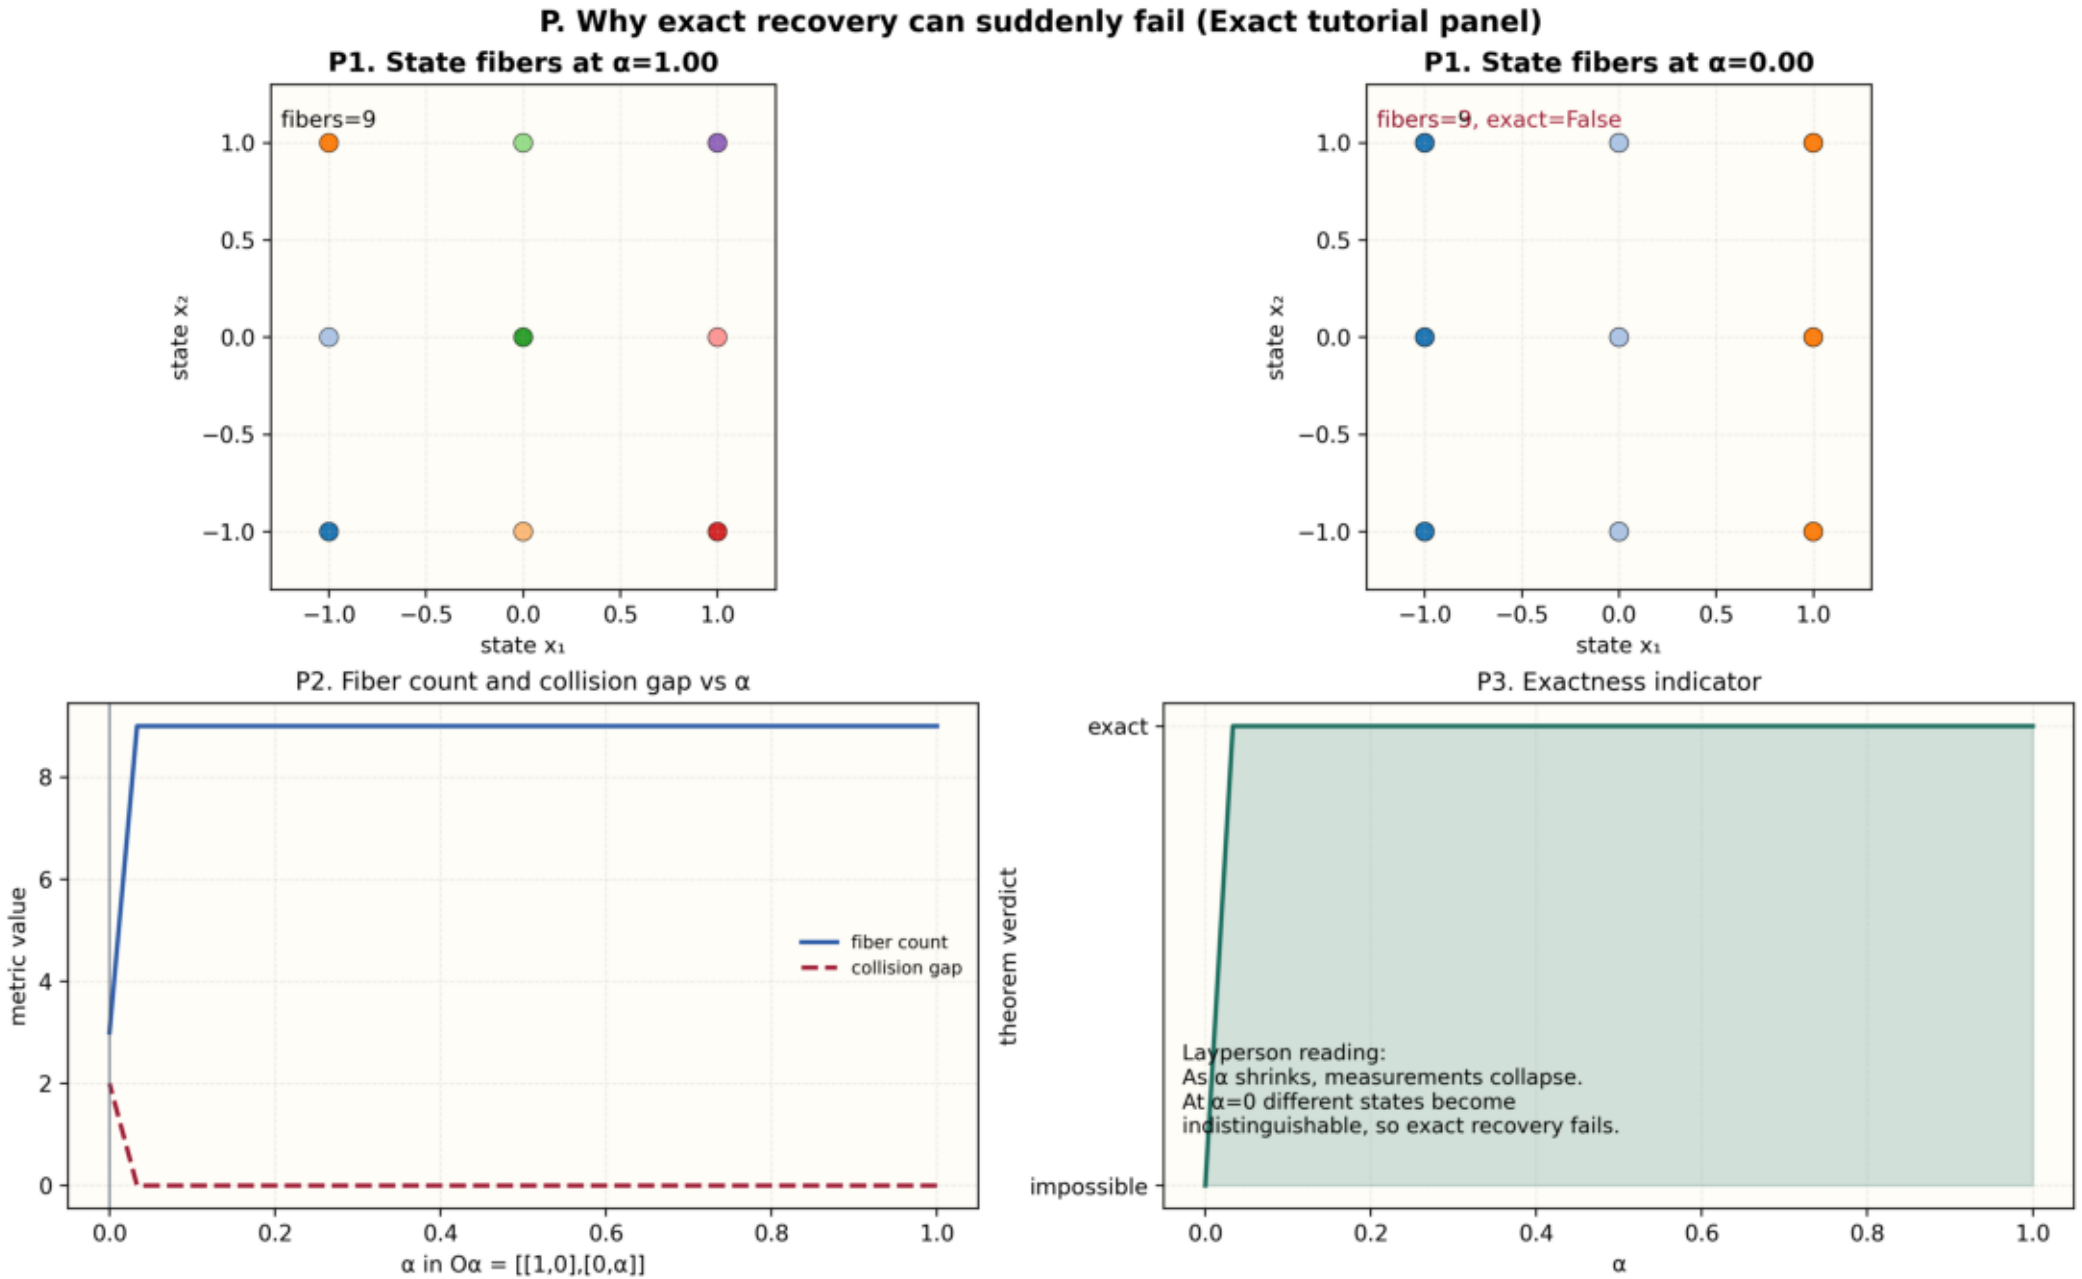




N_periodic_bounded_contamination_sweep

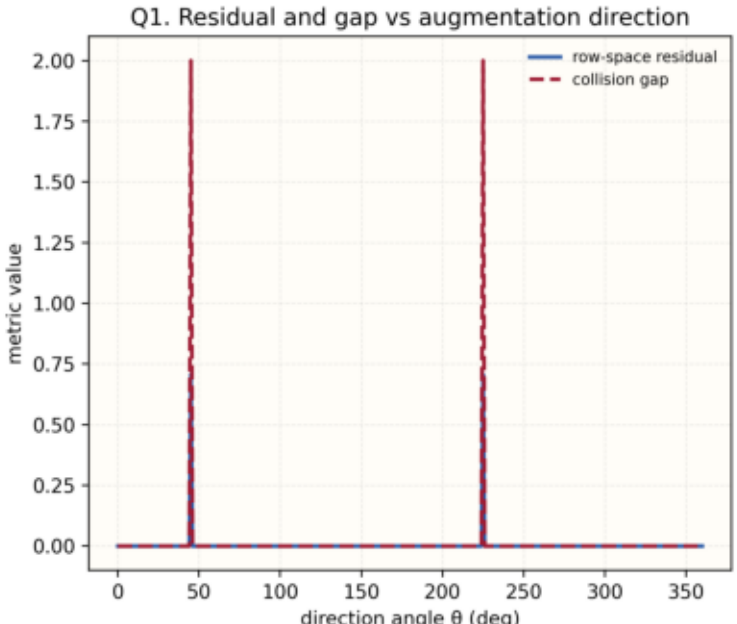


P_transition_tutorial_panel



Q_augmentation_tutorial_panel

Q. Minimal augmentation tutorial (Exact, direction-sensitive)



Q3. Layperson reading

Adding one measurement is not enough by itself.

You need the right direction.

Same count can be exact or impossible, depending on alignment with the target.

R_ocp_program_story_map

R. Complete OCP program story map (Schematic with exact repo pointers)

Where each step lives in the repo:\n1) Core theorem spine: docs/finalization/theorem-spine-final.md\n2) Fiber/recoverability branch: docs/fiber-based-recoverability-and-impossibility/\n3) Same-rank and anti-classifier logic: docs/research-program/theorem-normalization-report.md\n4) Dynamic/asymptotic layer: docs/theory/dynamic-correction-layer.md\n5) Bounded-domain lane: docs/cf8/restricted-flow-recoverability.md\n6) Workbench entry: docs/workbench/index.html
